14. Comments, if applicable							

Complete one column each morning for the previous night. Write the date of that morning at the top. Use your best estimates; you do not need to check the clock during the night. Complete days 1–7 on page 1 and days 8–14 on page 2.

1. Medication or alcohol

List what you took to help you sleep, the dose or amount, and the time you took it. Write “none” if you did not take anything.

2–3. Bedtime and trying to sleep

Row 2 is when you got into bed. Row 3 is when you began trying to sleep. These may differ if you read or relaxed in bed first. Circle a.m. or p.m.

4. SOL — time to fall asleep

Sleep onset latency (SOL) is the time between starting to try to sleep and first falling asleep. Example: you tried to sleep at 11:00 p.m. and fell asleep around 11:30 p.m. Your SOL is 0 hours, 30 minutes.

5. Number of awakenings

Count how many times you woke after first falling asleep. Do not count your final awakening. Write 0 if there were none.

6. WASO — awake during the night

Wake after sleep onset (WASO) is the total time awake after first falling asleep and before your final awakening. Add the awakenings together. Example: 10 minutes + 20 minutes + 15 minutes = 0 hours, 45 minutes. Do not include SOL or time awake after your final awakening.

7. Waking earlier than planned

Circle yes or no. If yes, record how much earlier you woke than you had planned. Example: waking at 5:30 a.m. instead of 6:30 a.m. is 1 hour, 0 minutes early.

8–9. Final awakening and leaving bed

Row 8 is the last time you woke before starting your day. Row 9 is when you actually got out of bed for the day. Record both, even if the times are the same.

10. Total sleep time

Estimate how much you actually slept that night, excluding time awake. One way to check: take the time from trying to sleep (row 3) to final awakening (row 8), then subtract SOL (row 4) and WASO (row 6). Record naps separately in row 13.

Example of total sleep time

Trying to sleep at 11:00 p.m. and waking finally at 7:00 a.m. gives an 8-hour window. Subtract 30 minutes of SOL and 45 minutes of WASO: total sleep time is 6 hours, 45 minutes.

11–12. Sleep quality and restfulness

For row 11, choose a number from 1 (very poor) to 5 (very good). For row 12, choose 1 (not at all rested) to 4 (well rested). These are your impressions; there is no right answer.

13. Naps and dozing

Add all the time you napped or dozed during the previous day. Write 0 hours, 0 minutes if you did not nap.

14. Comments

Note anything you would like to discuss, such as a schedule change or something unusual about that night. If you cannot remember an answer, leave it blank rather than writing 0.
